

Phenophase Matching

Directions:

Step 1: Cut out the plant images and text boxes on page 2.

Step 2: On page 3, put the images of plant life cycle events in the order you think they will appear throughout the year. (Early Spring (#1) to late Fall)

Step 3: Match the phenophase descriptions (text boxes) to the life cycle events by placing them below the image they describe.

First Leaf Emerged: First leaf has emerged. The leaf shape should be clearly visible above ground.

First Flower Stalk: First flower stalk is emerging from the stem of the grass, and you can see the first flower cluster rising above the leaves of the stem.

Middle Leaves: Most or all leaves that developed this season are green and healthy at their base.

First Fruit: First fruits becoming fully ripe or seeds dropping naturally from the plant.

Early Pollen: Some pollen is falling (less than %5).

First Pollen: Plant starts releasing powdery yellow pollen when touched.

Middle Flower Stalk: Many flower stalks have emerged .

Leaves All Withered: Most or all of the leaves that developed this season are dried and dead.
